

# INNOMAKE

ONE STEP AHEAD

# INNOMAKE THE „SEEING“ SHOE

INTELLIGENT OBSTACLE DETECTION MADE IN AUSTRIA

State-of-the-art technology for independent & safe mobility, packed in one system.

## **THE INNOMAKE**

The InnoMake unobtrusively recognizes obstacles between 0.5 and 4 meters in the walking direction. The warning is given by vibrations or acoustic signals. Depending on how far the obstacle is, the feedback gets faster or slower. The obstacle can be localized by the feedback of both shoes.

### **COMPLICATED YET SO SIMPLE**

Because needs are different, individual settings can be selected using the button or the smartphone. The InnoMake can be used with almost all shoes; just a simple adjustment is to be made. The InnoMake is dust and water resistant according to IP57.

### **„...A REAL EVERYDAY SUPPORT...“**

REPRESENTED BY FAMOUS ORGANIZATIONS  
AND CLINICS FOR THE BLIND

## **FOR ANY AGE**

Customers tell us every day that our technology inspires us. Independent mobility and safety are rapidly improving with the InnoMake.

## **BOTH HANDS FREE AT WORK**

Because spontaneous obstacles, such as pallets on the sidewalk, construction site fences, garbage cans or e-scooters, might turn out to be a great danger for cane users.

The InnoMake recognizes obstacles earlier than the cane and can avoid serious injuries. The same applies to parking spaces between cars or on the bus: activate the system, scan the surroundings, and walk through the free area without any worries.

## **FAST, SIMPLE AND EFFECTIVE**

1. Turn on the system
2. Attach to shoes
3. Experience everyday life in a relaxed manner

# THE INNOMAKE CAN BE TESTED AND ORDERED IN AUSTRIA AND GERMANY AT OUR PARTNERS AS FOLLOWS:

## VIDEBIS
